

Written steps for planar block in of the head from the front

1. Draw an oval to quick start the process
2. Draw a 'V' shape under the egg that flairs out to each side of the oval to space and place the neck and ears
3. Divide the oval in half vertically and then divide it in half horizontally with a line to mark where the eyes will be placed
4. Draw a another horizontal line just above the horizontal line for the eyes for the brow
5. Draw a horizontal line halfway between the brow line and the bottom of the chin. Place a tick mark where the bottom of the nose will be
6. Put in two ovals on either side of the head for the ears. Make sure they sit in the middle third of the head between the horizontal line for the eyebrow and the horizontal line for the nose
7. Divide the space between the bottom of the nose and the bottom of the chin into thirds. Make the first third a horizontal line for the split of the lips. Put a tick mark at the second 1/3 and draw a horizontal line. This will be the space between the bottom lip and the top of the chin. The horizontal line touching the edge of the head on each side will be where the jaw changes direction from the chin moving up to the ears
8. Draw an arc horizontally from just inside the end of the eye line on one side up through the brow all the way to the other side. Stop on the eye line just before the end/edge of the head
9. Draw a short line at a 45 degree angle from the dot in the middle of the forehead on the arc you drew for the brow
10. Put in two circles in the eye sockets for the eye balls and put a dot in the center
11. Swing a 'C' curve out vertically from each edge of the horizontal arc that is the brow. Aving the 'C' curve out beyond the edge of the head. This will separate the front plane of the head from the side plane
12. Draw a vertical line from both dots in the middle of the eyeball down to the bottom of the oval. This will be where the chin will sit.

13. Draw a keystone shape on the brow line. Then extrude short lines out from each of the 4 corners and connect the dots making it appear 3D
14. From the edge of the eye line on either side of the face drop a diagonal line down to each side of the chin
15. Put in the eyebrows. They start on the underside of the brow and twist over onto the front of the forehead
16. Draw a prism shape for the nose just below the keystone. Connect the side planes of the prism with the side planes of the prism
17. Put in the upper lip with a simple arc over the line that is the split of the lips. Put in the heart shaped tubercle. Connect the tips of the tubercle up to the bottom of the nose with straight lines. Put a middle gray tone on the upper lip
18. With a 'W' shape put in the bottom lip. Shade the area underneath it with a light gray tone
19. Establish the chin box
20. Draw the upper and lower eyelids over both eyeballs. Draw a circle in between the eyelids and shade it with a middle gray tone. Put a middle gray tone under the lower lid
21. Put a circle for the tip of the nose creating the ball. Put in the wings of the nostrils. Draw a long diamond shape from the keystone down to the ball of the nose making them interconnect
22. Extend the neck line down from either side of the jaw for the finish.
